## Eötvös Mathematical Competition 1901

1. Prove that, for any positive integer $n, 1^{n}+2^{n}+3^{n}+4^{n}$ is divisible by 5 if and only if $n$ is not divisible by 4 .
2. If $u=\cot 22^{\circ} 30^{\prime}$ and $v=1 / \sin 22^{\circ} 30^{\prime}$, prove that $u$ satisfies a quadratic and $v$ a fourth degree equation with integral coefficients and leading coefficient 1.
3. Let $a$ and $b$ two natural numbers whose greatest common divisor is $d$. Prove that exactly $d$ of the numbers $a, 2 a, 3 a, \ldots, b a$ are divisible by $b$.
